

Behavioral disorders are the most common mental health problem in children/young people and have a significant impact on functioning and quality of life. Rates of mental health problems (including antisocial personality disorder) are considerably increased for adults who had a conduct disorder during childhood. Gives advice on prevention strategies and provides evidence for a wide range of psychological and psychosocial interventions, plus pharmacological and physical interventions. Commissioned by the National Institute for Health and Clinical Excellence (NICE). The CD-ROM contains all of the evidence on which the recommendations are based, presented as profile tables (that analyze quality of data) and forest plots (plus, info on using/interpreting forest plots). This material is not available in print anywhere else. Readership Primarily, healthcare professionals in child and adolescent mental health services (CAMHS), and secondarily, healthcare professionals in primary care. Related titles RCPsych Publications have co-published all other titles in this series, recent guides include: Self-Harm (ISBN 978 1 908020 41 3) and Common Mental Health Disorders (ISBN 978 1 908020 31 4).
