

Cameroon contains tropical Africa's most species-diverse hotspots for plants. This addition to the Red Data Book of the International Union for the Conservation of Nature and Natural Resources documents 815 rare threatened species in Cameroon, most of which have been assessed here for the first time. Since numerous species occur beyond Cameroon, the new assessments are also relevant to Nigeria and Gabon, as far west as Guinea, and as far east as Congo and Rwanda-Burundi. The authors provide short species descriptions to aid identification in the field, notes on habitats and threats, distribution maps, and management suggestions to promote better conservation. This will be an essential publication for the local and international conservation and environmental communities, the international extractive, agricultural, forestry, and development industries, local NGOs, and botanists.

Ebene Geometrische Gebilde Erster Und Zweiter Ordnung Vom Standpunkte Der Geometrie Der Lage Betrachtet... (German Edition), Equine Digestion: Its Decidedly Different (Spotlight on Equine Nutrition), Beach Trip Biology: An Educational Snorkeling Guide to the Caribbean (Suitcase Studies Educational Guides) (Volume 1), Achieve The Tricky Bits Science: Practice Questions, Seminar on New Results in Nonlinear Partial Differential Equations: A Publication of the Max-Planck-Institut fur Mathematik, Bonn (Aspects of Mathematics), Oceanography and Marine Biology: An Annual Review.
