

This graduate-level textbook treats the basic chemistry of high energy materials - primary and secondary explosives, propellants, rocket fuel and pyrotechnics - and provides a review of new research developments. Applications in both military and civil fields are discussed. The book also offers new insights into green chemistry requirements and strategies for military applications. This work should be of interest to advanced students in chemistry, materials science and engineering, as well as all those working in defense technology.

Quantitative Methods in The Study of Animal behavior, A Laboratory Manual of Elementary Physical Chemistry, Reproduction in Mammals: Volume 1, Germ Cells and Fertilization (Reproduction in Mammals Series) (Bk. 1), FCAT Transparencies Grade 8 (Glencoe Science), W & X Things (A Childrens Picture Book) (A to Z Things Series, Book 23), Guidebook to Stereochemistry, Einfluss eines Psychological-Skills Training: auf die mentalen Einstellungen und Kompetenzen bei Sportschützen (German Edition),
